<p><b>STATUS:</b> In 1996, IDEM began investigating the United Technologies Corporation (UTC) facility (formerly Sheller Globe). To date, IDEM has conducted eight (8) sampling events. Results have shown elevated levels of PCBs in the soil and groundwater. It is believed that contamination from UTC has impacted the Little Mississinewa River, Harter Park as well as residential property downstream. The Toxic Substances Control Act (TSCA) at the USEPA is working with UTC to continue investigations and determine the extent of contamination.</p>
